Doctors say life begins at conception

Dr. Jerome LeJeune, University of Descartes in Paris, states, "after fertilization has taken place a new human being has come into being." He says this "is no longer a matter of taste or opinion. Each individual has a very neat beginning, at conception."

Professor Micheline Matthews-Roth, Harvard University Medical School: "It is incorrect to say that biological data cannot be decisive.... It is scientifically correct to say that an individual human life begins at conception...."

Q&A

Is it alive? Is it human? The child has human DNA from his/her human parents. S/he is growing. S/he is a living human.

Is the unborn child simply a part of the woman's body, like an appendix or kidney?

No. Every part of the woman's body has her DNA. The unborn child has it's own DNA. Very often the child has its own blood-type, and is the opposite sex from the mother.

Do abortionists believe the child is alive? Many do. Dr Warren Hern, an abortionist, describes the technique on a 17 week child. "... I began an abortion on a young woman who was 17 weeks pregnant.... I inserted my forceps into the uterus and applied them to the head of the fetus, which was still alive....I closed the forceps, crushing the skull of the fetus, and withdrew the forceps. The fetus, now dead, slid out more or less intact."

Are abortions safe? No. An innocent child dies. No. There is an increase in the risk of breast cancer, placenta previa, preterm births, and suicide to the mother.

If I have had an abortion, will I go to hell? That is your choice. Yes, you have murdered and offended God, but He loves and wants to forgive you. He said: "Come now, and let us reason together," says the LORD, "though your sins are as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool." ISAIAH 1:18. You need to do is trust in His love, decide to live a better life, and be joined with Him in baptism. Romans 6:3-7 [www.zhenaihenghuo.org]

Amazing!

Sarah Marie Switzer, 24 weeks old in her mother's womb, had to undergo spinal surgery. During the operation, she put her arm out through the hole where the surgeon was working and held his finger.

Conception: The parents' DNA combine to form the unique DNA of a new human being.

Day 5-9: The little person snuggles into the mother's womb wall for safety and nourishment. The child's sex can be determined scientifically

Day 18: The heart and eyes have begun forming

Day 28: The child has budding arms and legs

Day 35: The child's nose, ears and mouth are taking shape

Day 42: The child's skeleton is formed. His/Her brain is controlling muscles and organs.

8 weeks: The hands and feet are almost perfectly formed

10 weeks: The child can squint, change facial expressions, and swallow

Day 1: The cells divide. They do so because they are alive.

Day 14: The child secretes a hormone that suppresses the mother's menstruation cycle

Day 21: The heart has begun pumping blood

Day 30: The child has a brain and is 10,000 times bigger than s/he was at conception

Day 40: Brainwaves can be measured

Day 45: The child has a small tongue and buds for 20 milk teeth.

9 weeks: The fingers can grasp objects. The child can suck his/her thumb. S/he can do somersaults in the womb

12 weeks: The child kicks, turns its feet, curls toes, makes a fist

After this stage, nothing new develops. The child simply grows bigger and matures
